DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 6 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Kitayama et al. (US 7035175).

In regard to claim 1, Kitayama et al. teaches a method for calibrating a center error offset in a control system of an optical drive, the optical drive having photo detectors for generating an optical signal (column 1 lines 44-45), a focusing coil for controlling a focus state, a sled for setting the photo detectors and the focusing coil and a sled motor for controlling the movement of the sled (these are inherent elements in an optical disc system), the method comprising the steps of: controlling the focusing coil to focus on a rotating disk; controlling the sled motor to keep the sled static; controlling a tracking coil with different tracking coil control values (fig. 9 element 11a); measuring and storing data of the optical signal and a center level of a center error CE responding to each of the tracking coil control values (element 3); and selecting a largest value from the data of the optical signal and setting the center level of the

Application/Control Number: 10/743,147

Art Unit: 2627

center error CE responding to the largest optical signal as a center error offset (column 14 lines 30-35).

In regard to claim 2, Kitayama et al. teaches wherein the optical signal is a tracking error signal.

Apparatus claims 6 and 7 are drawn to the apparatus corresponding to the method of using same as claimed in claims 1 and 2. Therefore apparatus claims 6 and 7 correspond to method claims 1 and 2 and are rejected for the same reasons of anticipation as used above.

Response to Arguments

Applicant's arguments filed 7/13/07 have been fully considered but they are not persuasive. In regard to applicant's arguments that Kitayama et al. does not teach "selecting a largest value from the data of the optical signal and setting the center level of the center error CE responding to the largest optical signal as a center error offset", the examiner maintains this rejection because the DC offset of the tracking error signal is the same as the claimed central error signal. They both refer to the lens being shifted from the center of the optical axis. Furthermore the examine has now pointed to column 14 lines 30-35 to show that Kitayama et al. uses the maximum tracking error signal. In regard to the limitation "setting the center level of the center error CE responding to the largest optical signal as a center error offset", the error signal of Kitayama et al. is a DC signal, therefore the entire signal is the center level of the signal.

Conclusion

Page 4

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Haley whose telephone number is 571-272-0574. The examiner can normally be reached on M-F 8:30am-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William Korzuch can be reached on 571-272-7589. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
